GALVANISED STEEL

The future of roofline

CASE STUDY - ANTHRACITE - SUDBURY

This stunning self-build project is a great example of what can be achieved by using the right combination of materials, textures and colours

The dark grey windows, contrasting against the pure white facade, are a bold design statement. When an equally bold roofline as needed to balance the building design, the customer had no hesitation in choosing Rainclear's Anthracite Grey Steel Gutter system.

Working with the builder, the client ordered the goods online at www.rainclear.co.uk -

"We found the website easy to navigate.

Product selection was made easy by the 'browse by' size and colour filters, and paying was easy with secure payment by card or Paypal.

There was free delivery on orders over £300 and I was really surprised by the speed of delivery too! It was all very efficient with my order arriving the very next day.

I was also impressed at how easy it was to order a bespoke joint - we had a peculiar angle at the back of the house had to order a special joint.

It came within 2 weeks having been made specially - amazing!"

The builder was also pleased with the products and found installation very easy with dry-jointed rubber lined gutter connectors, push-on stop ends and wrap-around outlets. The end result is a very high quality rainwater system that will protect the building fabric for years to come.

This new build makes a bold and contemporary statement in a beautiful rural village location in Suffolk.

Specifications
